Validating Data

Create a project in Android Studio named *ValidatingYourName*.
The program should request the following data from the user and validate whether the data is correct using regular expressions:

- Full Name: Only letters, hyphens (-), and apostrophes (') between 3 and 50 characters.
- Email: Must follow a valid email address format.
- DNI: 7 or 8 numbers followed by an uppercase letter.
- Age: A number with a maximum of 3 digits.
- Phone Number: A 9-digit number that must start with 9, 6, or 7.
